General Comment

The mass destruction hurting our planet today is a direct result of the fossil fuel industry using our atmosphere as a garbage dump even when they knew the havoc it would wreak. I have been watching the Frontline series on public television about how much and how long the oil industry sewed lies and doubt about the effect of fossil fuels. Pensions should not invest in this industry that has shown so little stewardship for the earth.

Hopefully soon fossil fuels will no longer be a profitable investment. Hopefully soon people will realize it as a stranded asset. People like me depend on pensions for our livelihoods. Please work to invest funds in clean energy not pollution.
