1.1 Introduction

The ICD-10-CM is a statistical classification and coding system used to assign appropriate codes for signs, symptoms, injuries, diseases, and other medical conditions. ICD-codes are assigned, based on the DEEOIC's claimants medical documentation (records), including, but not limited to physician notes, diagnostic tests, and surgical reports. The transition to ICD-10-CM is federally mandated for all Health Insurance Portability and Accountability Act (HIPAA) covered entities such as providers, payers, software vendors, clearing houses, and third party billing services. The change affects the manner in which these entities code for diagnosis and inpatient surgical procedures. The purpose of this transition is due to the fact that ICD-9-CM reports non-specific data about patient's medical conditions and hospital inpatient procedures. ICD-10-CM allows for greater specificity and accuracy when reporting diagnoses.

1.2 Scope

On October 1, 2015, the Division of Energy Employees Occupational Illness Compensation (DEEOIC) will transition to the new International Classification of Diseases, Tenth Revision, and Clinical Modification (ICD-10-CM) Coding System. Due to the ICD-10 transition, there will be a substantial increase in the number of codes that health care providers use when coding a patient's diagnosis. DEEOIC Claims Examiner (CE) staff will be trained on the ICD-10 guidelines and conventions, as well as fundamental knowledge of how to decipher, understand and accurately apply codes using ICD-10, this training is imperative to ensure accurate coding for accepted conditions. In summary, ICD-9-CM is being phased out because it is outdated and there is no longer space for new codes, lacks specificity and detail, is a 30 year old system and does not support the changes to new technology and medical diseases, and has been federally mandated by Congress.

1.3 ICD-10-CM Format and Structure

Some of the major differences between ICD-9-CM and ICD-10-CM is the significant increase in ICD code of diseases and the number of system chapters in the complete code set of the ICD-10-CM coding book. Within ICD-9-CM, the code book contained approximately 13,600 codes and 17 chapters. In ICD-10-CM, the code book contains approximately 69,000 codes and 21 chapters. The majority of codes listed in the ICD-10-CM are in the musculoskeletal and injury poisoning chapters.

ICD-10-CM allows for longer code description with greater clinical detail and specificity and full code titles.

Whereas, ICD-9-CM lacked specificity and contained abbreviated code titles producing shorter descriptions.

Example of Coding Format

ICD-9-CM

143 Malignant neoplasm of gum

> 143.0 Upper gum

> 143.1 Lower gum

ICD-10-CM

C03 Malignant neoplasm of gum

> C03.0 Malignant neoplasm of upper gum

> C03.1 Malignant neoplasm of lower gum

ICD-10-CM codes consist of 3 to 7 characters and are represented by alpha and numeric.

<u>ICD-10-CM</u>	<u>ICD-9-CM</u>
69,000 codes	13,600 codes
21 chapters	17 chapters
Consists of 3 – 7 Characters	3 - 5 Characters
Character 1 is alpha (A-Z, not case sensitive)	First Character is numeric or alpha (E or V)
Character 2 is numeric	Characters 2-5 are numeric

Character 3 -7 are alpha or numeric	
Longer code description	Shorter code description

1.4 Laterality

ICD-10-CM coding structure allows for the appropriate identification of affected body part location (Left vs Right vs Bilateral) for specific diagnoses. Laterality codes are represented with the specific code digit as the final character of the code.

Location	Rule	Example
Right Side (RT)	Always last character "1"	H16.011 Central corneal ulcer, right eye
Left Side (LT)	Always last character "2"	H16.012 Central corneal ulcer, left eye
Bilateral (RT & LT)	Always last character "3" <i>**If a bilateral code does not exist and the condition is bilateral, assign separate codes for both the left and right side</i>	H16.013 Central corneal ulcer, bilateral

Diagnoses that will require Laterality

- Joint Pain
- Joint effusion
- Injury
- Fractures
- Dislocations
- Arthritis
- Cerebral infarction
- Extremity atherosclerosis
- Pressure ulcers
- Cancers, neoplasms (breast, lung, bones, etc.)

1.5 Coding Process

ICD-10-CM Coding Exercise:

Let's try to look up hypertension in the ICD-10-CM coding book.

HYPERTENSION

Step 1: Look up term in the Index. The index is in alphabetic order.

Hypertension, hypertensive (accelerated) (benign) (essential) (idiopathic) (malignant) (systemic)

You should find the ICD-10 code of "I10"

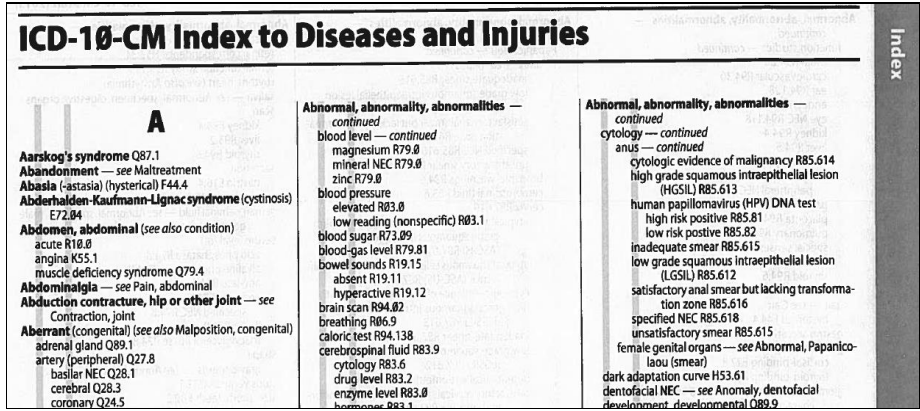

Step 2: Now let's verify the code "I10" in the Tabular section.

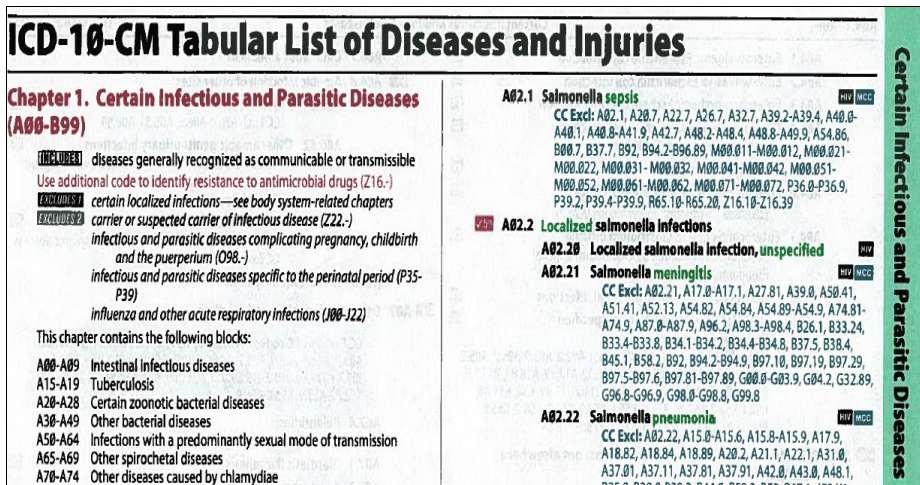

I10 Essential (primary) hypertension.

The ICD-10-CM code book retains the same traditional format and layout, index section view and tabular view, as the ICD-9-CM. The index section is found at the very front of the book and can be used to look-up a diagnosis. Diagnosis codes can be verified and confirmed by using the tabular sections (21 sections/chapters) which is found in the middle of the book after the index table.

Index View Example

Tabular View Example

1.6 ECS Coding with ICD-10-CM

ICD-9-CM and ICD-10-CM codes can be assigned based on the claimants' medical documentation in the case file. Within the ECS development component for a new medical condition the user has the ability to select the ICD code type (ICD-9 or ICD-10), or can look up ICD-10 diagnosis, or conduct a manual entry of the ICD-10 code.

Medical - New

Development Status: Not Started | Development Status Date: | Note: |

Determination Status: | Determination Date: |

ICD Type: ICD-9 ICD-10

ICD-10: | Lookup ICD-10 | Manual Entry ICD-10 |

Condition: |

Condition Type: Select a Condition

Diagnosis Date: / / | Symptom Only: |

Eligibility Begin: / / | Letter Decision: |

Eligibility End: / / |

Part Type: Part B Part E |

BP Batch ID: |

EPS Batch ID: |

Benefits Awarded Date: |

Condition Filing Date: |

Claim Form: | Select Form |

No creation or modification information available | Save | Cancel

ECS condition types will be pre-populated for both ICD-9 and ICD-10 codes. This is a new feature of ECS and will be implemented in ECS release 1.15 scheduled for 9/25/2015.

1.6.1 ICD-10-CM Coding with Specificity

When a specific condition, illness, etc., contains a 4th, 5th, 6th, or 7th digit, the Claims Examiner (CE) must use all available digits to identify the condition. When selecting ICD-9-CM or ICD-10-CM codes, the CE should always use the code that most specifically describes the medical condition reported. The CE should make every effort to accurately assign the specific diagnosis code based on medical records and medical documentation of the claimants claimed condition.

When sufficient medical and/or clinical information is not known or is unavailable to accurately assign a specific diagnosis code(s), the CE should make every attempt to contact the treating physician for a more definitive diagnosis. If the CE is unable to acquire a specific diagnosis code from the treating physician, they can select an unspecified code.

1.6.2 ECS Eligibility Begin Date

When assigning an ICD code medical condition in ECS, with the eligibility begin date **prior** to October 1, 2015, the CE will need to use ICD-9-CM coding. For example, if the medical records reflect hypertension, unspecified, and the eligibility begin date is

September 30, 2014, the CE enters “401.9” as the ICD-9-CM code in the ECS medical condition field. If the eligibility begin date is **on or after** October 1, 2015, the CE will use ICD-10-CM coding. For example, if the medical records list a primary diagnosis of hypertension and the eligibility begin date is October 1, 2015, the CE enters “I10” as the ICD-10-CM code in the medical condition field in ECS.

If the CE mistakenly enters an eligibility begin date for an ICD-10-CM medical condition where the date is prior to October 1, 2015, ECS will display an error that the eligibility begin date is before 10/1/2015 and that you can only enter an ICD-9-CM code for eligibility begin date prior to 10/1/2015.

Entering an ICD-10 code prior to October 1, 2015, will display a pop-up box stating that the eligibility begin date is before 10/1/2015 and that you can only enter an ICD-9 code.

1.7 Coding with Medical Code Expert

As another resource to look up or to verify an ICD-9-CM or ICD-10-CM, the CE can use the Medical Code Expert application by going to the website <https://www.medicalcodeexpert.com> to assist in the proper identification of a diagnosis.

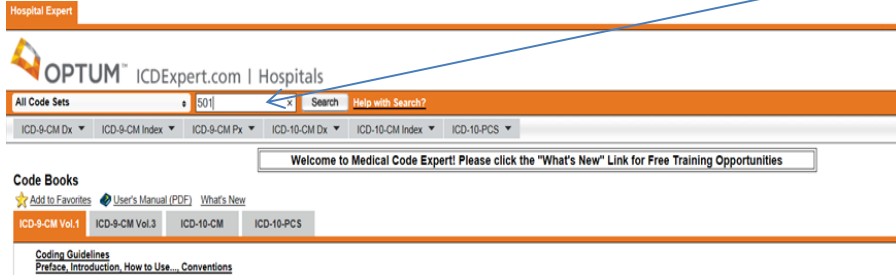

Login with your assigned username and password

Enter the diagnosis name or the ICD code. Choose from the dropdown, the Code Set ICD-9 or ICD-10.

Try to look up "Asbestosis" using an ICD-9-CM code.

Step 1: Enter diagnosis code "501"

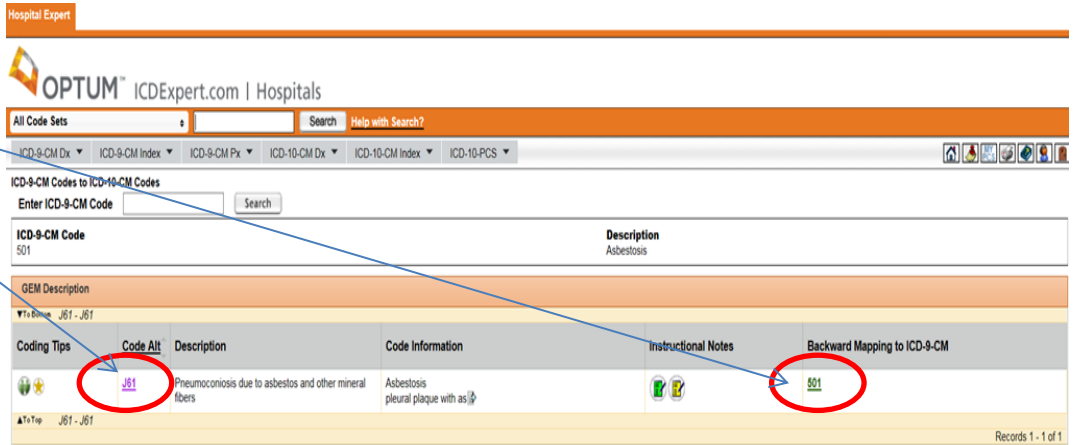

Once the ICD-9-CM code has been entered, it will display diagnosis description. From this view, you have the capability to view the appropriate ICD-10-CM that is cross-walked to the ICD-9-CM that you have entered.

You can click on the  to display the ICD-10-CM code and description that is cross-walked to the ICD-9-CM that you entered.

ICD-9-CM code
 "501" crosswalks
 to
 ICD-10-CM "J61"

The result of the crosswalk will display the ICD-10-CM code under Code Alt column and also display the backward mapping to the ICD-9-CM code. You can also the diagnosis description (full or part) in the search box to obtain the same results.

1.8 NIOSH Referral Form

The NIOSH Referral Form has been updated to reflect both ICD-9-CM and ICD-10-CM coding.

5	EE Covered Cancer Information	Enter the EEs verified diagnosed cancer(s). Create a table (copy, cut, paste); for each primary cancer or secondary cancer for which there is an unknown primary.	
a	Primary or Secondary	Place an "X" (by clicking) in the box that best describes the cancer (Primary or Secondary)	
b	Cancer Description/Type	Enter the cancer description from the pathology/operative report, etc.	Chronic myelomonocytic leukemia, in remission
c	Associated ICD-9 Code	Enter the ICD-9 code that best describes the cancer	206.11
d	Associated ICD-10 Code	Enter the ICD-10 code that best describes the cancer	C93.11

Enter the associated ICD-9-CM and ICD-10-CM.

1.9 Bill Processing Changes

In order to accommodate the ICD-10-CM transition, the CMS-1500 (HCFA-1500) has been revised to support the ICD-10-CM code set. The new CMS-1500 form includes a new field for indicating whether an ICD-9 or ICD-10 code is being used for billing purposes.

HEALTH INSURANCE CLAIM FORM APPROVED BY NATIONAL UNIFORM CLAIM COMMITTEE

1. <input type="checkbox"/> MEDICARE (Medicare#) <input type="checkbox"/> MEDICAID (Medicaid#) <input type="checkbox"/> TRICARE (#DW/CoDr) <input type="checkbox"/> CHAMPVA (Member ID#) <input type="checkbox"/> GROUP HEALTH PLAN (ID#) <input type="checkbox"/> FECA BLK LUNG (ID#) <input type="checkbox"/> OTHER (ID#)		1a. INSURED I.D. NUMBER (For Program in Item 1)	
2. PATIENT'S NAME (Last, First, Middle Initial)		3. PATIENT'S BIRTH DATE SEX M F	
5. PATIENT'S ADDRESS (Street, City, State, Zip)		6. PATIENT RELATIONSHIP TO INSURED <input type="checkbox"/> Self <input type="checkbox"/> Spouse <input type="checkbox"/> Child <input type="checkbox"/> Other	
TELEPHONE (Include Area Code):		8. RESERVED FOR NUCC USE	
9. OTHER INSURED'S NAME (Last, First, Middle Initial)		10. PATIENT'S CONDITION RELATED TO:	
a. OTHER INSURED POLICY OR GROUP NUMBER		a. EMPLOYMENT? (Current or Previous) Yes No	
b. RESERVED FOR NUCC USE		b. AUTO ACCIDENT? PLACE (State) Yes No	
c. RESERVED FOR NUCC USE		c. OTHER ACCIDENT? Yes No	
d. PATIENT'S PLAN OR PROGRAM NAME		10d. CLAIM CODES (Designated by NUCC)	
		a. INSURED'S DATE OF BIRTH SEX M F	
		b. OTHER CLAIM ID (Designated by NUCC)	
		c. INSURANCE PLAN NAME OR PROGRAM NAME	
		d. IS THERE ANOTHER HEALTH BENEFIT PLAN? Yes No If yes, complete items 9, 9a, and 9d.	

21. DIAGNOSIS OR NATURE OF ILLNESS OR INJURY Relate A-L to service line below (24e)				ICD Ind. <input type="checkbox"/>
A.	B.	C.	D.	
E.	F.	G.	H.	
I.	J.	K.	L.	
17. NAME OF REFERRING PROVIDER OR OTHER SOURCE				19. FIRST DATE OF SERVICE RELATED TO CURRENT SERVICE FROM: TO:
19. ADDITIONAL CLAIM INFORMATION (Designated by NUCC)				20. OUTSIDE LAB? \$ CHARGES Yes No
21. DIAGNOSIS OR NATURE OF ILLNESS OR INJURY Relate A-L to service line below (24e)				22. RESUBMISSION CODE ORIGINAL REF. NO.
24. A. DATE(S) OF SERVICE B. PLACE OF C. D. PROCEDURES, SERVICES, OR SUPPLIES (Explain Unusual Circumstances) E. DIAGNOSIS F. G. DAYS OR H. EPSON I. ID J. RENDERING				23. PRIOR AUTHORIZATION NUMBER

ICD Ind. will display "9" for ICD-9-CM or "0" for ICD-10-CM

The number of diagnosis codes that can be displayed on the new CMS-1500 has been expanded from 4 diagnosis' to 12 diagnosis'.

For inpatient services billed on the required UB-04 form with a **discharge date** on or after October 1, 2015 will be submitted with the appropriate ICD-10-CM diagnosis and surgical procedure codes. UB-04 bills that have a **discharge date** prior to October 1, 2015 will continue to utilize the ICD-9-CM diagnosis and surgical procedure codes.

For outpatient services billed on the UB-04 form with a **date of service** on or after October 1, 2015 will be submitted with the appropriate ICD-10-CM diagnosis codes. Outpatient services billed with a **date of service** prior to October 1, 2015 will continue to be billed with the ICD-9-CM diagnosis codes. Bills (CMS-1500 or Outpatient) cannot contain a combination of ICD-9-CM and ICD-10-CM on the same bill. Bills must be split if services cross over the ICD-10-CM implementation date (October 1, 2015).

Split Bill Example:

An outpatient bill that includes services provided within a date range of 9/20/2015 to 10/2/2015 would need to be split.

One bill will include only ICD-9-CM diagnosis codes between the dates of service 9/20/2015 to 9/30/2015.

Another bill will include on ICD-10-CM diagnosis codes between the dates of service 10/1/2015 to 10/2/2015.

1.10 Prompt Pay

Prompt Pay codes and External Impairment rating will not be affected by the ICD-10-CM transition. The existing ICD-9-CM Prompt Pay (PA) codes that are currently being used for CMC referrals will remain the same.

V49.8	CMC File Review
V48.8	CMC Impairment Rating
V68.2	Second Medical Opinion
V68.81	Medical Records
V70.9	External Impairment Rating

1.11 Treatment Suites

The treatment suites have been modified to recognize both ICD-9-CM and ICD-10-CM diagnosis codes. All existing ICD-9-CM codes are mapped to the equivalent ICD-10-CM code(s). There are some ICD-9 codes that are mapped to more than one ICD-10 code. There are also ICD-10 codes that map back multiple ICD-9 codes.

1.12 Medical Benefits Identification Card (MBIC)

To support the transition of ICD-10-CM, the MBIC has been redesigned to better protect the privacy and the confidentiality to our claimants. As a result, the medical conditions have been removed from the front of the card. The MBIC 10-digit card ID has been moved to the front card

where it is now more visible for the claimant and treating providers. In addition, the Benefit Identification Number (BIN) and DEEOIC Group ID have also been added to the front of the card to assist pharmacy providers when verifying coverage and submitting electronic point of sale (POS) transactions.

Disclaimer: Special Exposure Cohort (SEC) coding reference reflects potentially usable ICD coding for SEC qualifying diagnoses. ICD codes should be verified using the following website: <https://www.medicalcodeexpert.com/expert> or the ICD-10 CM coding book. Claims Examiners must evaluate the evidence independent from the SEC coding reference to ensure that the circumstances of the claim correctly establish that the employee's diagnosis qualifies him or her for the SEC class.

Coding Tips

- It is essential to use both the Index and Tabular List when locating and assigning a code. Never code strictly from the alphabetical index. Always confirm your code choice in the tabular list to ensure the most appropriate code choice selection.
- The Index does not always provide the full code. Selection of the full code, including laterality and any applicable seventh character can only be done in the Tabular list. A dash (-) at the end of an Index entry indicates that additional characters are required. Even if a dash is not included at the Index entry, it is necessary to refer to the Tabular list to verify that no seventh character is required.

ANEMIAS

Anemias are coded by type: deficiency, hemolytic, aplastic, etc. This needs to be documented clearly.

DIABETES

Diabetes codes in ICD-10-CM are greatly expanded, and are combination codes. In ICD-9-CM, it was appropriate to “code also” related manifestations of diabetes, but in ICD-10_CM, these are all reported in one code. All cause and effects of diabetes and any manifestations must be clearly documented by the provider. In ICD-10-CM, Diabetes is coded by “Type” Type 1 (E10) vs. Type 2 (E11), with Type 2 being the default for Diabetes, NOS.

NEOPLASMS

To properly code a neoplasm, documentation needs to establish if the neoplasm is: benign, in-situ, malignant, or of uncertain histologic behavior. If malignant, any secondary (metastatic) (spreading) sites should also be determined and coded.

LATERALITY

When appropriate, codes specify anatomical location of issue/problem as pertaining to the right side, left side, or unspecified in ICD-10-CM. The final character indicates laterality (when applicable) in ICD-10-CM. The right side is usually represented with a “1;” the left is usually represented with a “3.” Unspecified laterality may be represented with a “0” or a “9,” depending on where it is used.

4th-6th CHARACTERS

The fourth-sixth characters in ICD-10-CM codes define a more specific site, etiology (or origin), and manifestation or current state of the disease or problem.

7th CHARACTER

7th Character extensions are used to communicate the episode of care (sequelae) for obstetrics, injuries, and external causes of injuries. The 7th character may be different based on the chapter that is using the 7 characters. If a 7th character is ever required, the choice for the character can be found in the pink instruction box above the section in the tabular. Whenever applying a 7th character, it must always be in the 7th position. If there are less than 6 characters being used, then a placeholder “X” will be used as many times as necessary to allow the 7th character to appear in the correct 7th position of the code.

CASE STUDY EXERCISES

Try and look up some ICD-10-CM diagnosis codes on your own using the provided case studies.

First try using the index in the ICD-10-CM coding book to find the ICD-10-CM code for each case study.

Next take the code that you found and use it to find the full diagnosis description in the tubular list.

Now try finding the ICD-10-CM code using the Medical Code Expert software. You can manually enter the full or part of the description of the case study or use the ICD-10-CM code that you found in the book and place it in the search box.

Try some other codes on your own.

See if you can also locate the ICD-9-CM that is equivalent to your ICD-10-CM.

Have fun!

CASE STUDIES

CASE STUDY #1

Primary cancer of the vulva

CASE STUDY #2

Patient 80 years old is seen for follow up esophageal cancer of the upper third of the esophagus

CASE STUDY #3

Patient was treated at the dermatologist for basal cell carcinoma of the skin of the chin.

CASE STUDY #4

Patient suffers from hypertension that is uncontrolled.

CASE STUDY #5

Patient with Renal failure

CASE STUDIES ANSWER SHEET

CASE STUDY #1

ANSWER: *ICD-10-CM code -- C51.9*

CASE STUDY #2

ANSWER: *ICD-10-CM code-- C15.3*

CASE STUDY #3

ANSWER: *ICD-10-CM code-- C44.319*

CASE STUDY #4

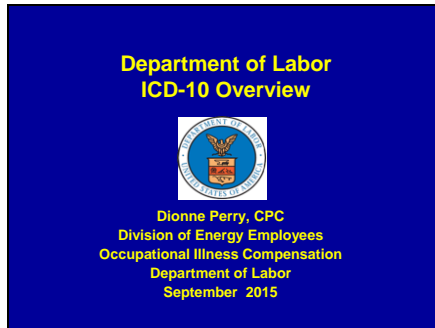

ANSWER: *ICD-10-CM code-- I10*

CASE STUDY #5

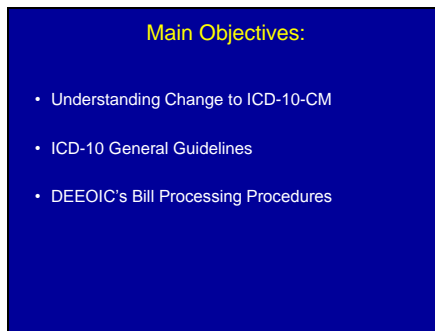

ANSWER: *ICD-10-CM code-- N19*

ICD-10-CM Slide Presentation

Slide 1

Slide 2

Slide 3

Effective October 1, 2015:

- ICD-10-CM will replace ICD-9-CM Volumes 1 and 2 for reporting diagnoses.
- ICD-10-PCS will replace ICD-9-CM volume 3 for reporting hospital inpatient procedures.

No impact on Current Procedure Coding (CPT) or Healthcare Common Procedure Coding System (HCPCS)

Slide 4

ICD-10-CM Facts:

- ICD-10-CM consists of 21 chapters compared to 17 chapters in ICD-9-CM.
- ICD-10-CM is very similar to ICD-9-CM by way of look up and basic guideline information.

Slide 5

Where are most of the ICD-10-CM codes?

- The majority of codes listed in ICD-10-CM are in the musculoskeletal and injury/poisoning section.

Slide 6

Why Is ICD-9-CM Being Replaced?

- Federally Mandated by Congress
- ICD-9-CM is outdated and running out of space for new codes.
- Lacks specificity and detail.
- 30 year old system, technology and medical conditions have changed

Slide 7

Who will be affected?

ICD-10 will affect diagnosis and inpatient procedure coding for everyone covered by HIPAA (Health Insurance Portability and Accountability Act).

This change includes: Providers, Payers, Software vendors, Clearinghouses, and third-party billing services.

Slide 8

Major Differences Between ICD-9-CM and ICD-10-CM:

ICD - 9-CM	ICD - 10-CM
33,600 codes	69,000 codes
Code book contains 17 chapters	Code book contains 21 chapters
Consists of 3 to 5 characters	Consists of 3 to 7 characters
1 st character is alpha or numeric	1 st character is alpha
Only utilizes letters E and V	Utilizes all letters (except U)
Second, third, fourth, and fifth characters are always numeric	Second character is always numeric
	Third, fourth, fifth, sixth, and seventh characters can be alpha or numeric
Shorter code descriptions because of lack of specificity and abbreviated code titles	Longer code descriptions because of greater clinical detail and specificity and full code titles

Slide 9

ICD-10 Structure

- ICD-10-CM codes consist of 3 – 7 characters
 - Character 1 is alpha (A – Z, not case sensitive)
 - Character 2 is numeric
 - Character 3-7 is either alpha (not case sensitive) or numeric

Slide 10

Examples of ICD-9-CM versus ICD-10-CM Neoplasms Codes:

- **ICD-9-CM**
 - 143 Malignant neoplasm of gum
 - 143.0 Upper gum
 - 143.1 Lower gum
- **ICD-10-CM**
 - C03 Malignant neoplasm of gum
 - C03.0 Malignant neoplasm of upper gum
 - C03.1 Malignant neoplasm of lower gum

Slide 11

Coding Process Remains the Same

- The ICD-10-CM code book retains the same traditional format
 - Index
 - Tabular
- Process of coding is unchanged
 - Look up a condition in the Index
 - Confirm the code in the Tabular

Slide 12

Biggest Change

Laterality! left vs. right vs. bilateral

- For bilateral sites, the final character of the codes in ICD-10-CM indicate laterality.
- Right side is always character 1 (RT)
- Left side is always character 2 (LT)
- Bilateral code is always character 3 (RT & LT)

Neoplasms Laterality:

- Laterality – Left Versus Right
- H16.011 Central corneal ulcer, right eye
- H16.012 Central corneal ulcer, left eye
- H16.013 Central corneal ulcer, bilateral

Slide 13

Diagnoses that will require Laterality

Joint Pain
Joint effusion
Injury
Fractures
Dislocations
Arthritis
Cerebral infarction
Extremity atherosclerosis
Pressure ulcers
Cancers, neoplasms (breast, lung, bones, etc.)

Slide 14

Coding Specificity

When a specific condition, illness, etc., contains a 4th, 5th, 6th, or 7th digit, the CE must use all available digits to identify the condition.

When selecting ICD-9 or ICD-10 codes, the CE should always use the code that most specifically describes the medical condition reported.

Slide 15

Unspecified Codes

- Diagnosis codes should be assigned as specifically and accurately as possible based on available medical record(s).
- When sufficient clinical information is not known or available, CE can select unspecified code.

Slide 16

ICD-10-CM Coding Examples:

Hypertension
Step 1
Look up term in Alphabetic Index:
Hypertension, hypertensive (accelerated)
(benign) (essential) (idiopathic) (malignant)
(systemic) I10

Slide 17

ICD-10-CM Coding Examples

Hypertension (con't)
Step 2
Verify code in Tabular:
I10 Essential (primary) hypertension

Slide 30

**Bill Processing
Changes**

Slide 31

HCFA 1500 Changes:

The HCFA 1500 claim form often referred to as the "CMS-1500 has been revised to accommodate the ICD-10-CM code set.

The new HCFA 1500 form includes a new field for indicating whether an ICD-9 or ICD-10 code is being used, and expands the number of possible diagnosis codes listed on the HCFA 1500 form from 4 to 12.

Slide 32

**Inpatient Bills:
UB-04**

Inpatient bills with a discharge date on or after 10/1/15 are required to utilize ICD-10 diagnosis codes and ICD-10 surgical procedure codes.

Inpatient bills with a discharge date prior to 10/1/15 continue to utilize ICD-9 diagnosis and surgical procedure codes.

Slide 33

**Outpatient Bills:
UB-04**

Outpatient bills with dates of service on or after 10/1/15 are required to utilize ICD-10 diagnosis codes.

Outpatient bills with dates of service prior to 10/1/15 continue to utilize ICD-9 diagnosis codes

Bills cannot contain a combination of both ICD-9 and ICD-10 codes, so bills must be split if services crossover the ICD-10-CM implementation date.

Slide 34

**Prompt Pay/External Impairment
Coding**

- No changes will occur. We will continue to use existing PA codes:
- Examples:
 - V49.8 CMC File Review
 - V49.8 CMC Impairment Rating
 - V68.2 Second Medical Opinions
 - V68.81 Medical Records
 - V70.9 External Impairment Rating

Slide 35

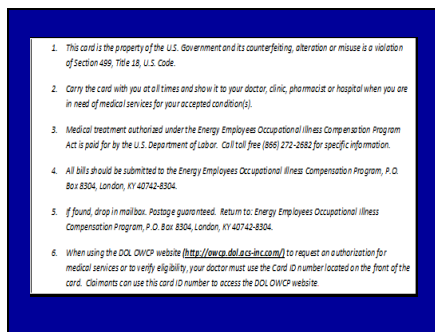

Treatment Suites:

- The treatment suites have been modified to recognize both ICD-9-CM and ICD-10-CM diagnosis codes. All existing ICD-9-CM codes are mapped to the equivalent ICD-10-CM code(s). There are some ICD-9 codes that are mapped to more than one ICD-10 code. There are also ICD-10 codes that map back multiple ICD-9 codes.
